

Bach®

17043GYR Professional Trumpet

The NEW Bach Apollo trumpet is a modern take on an original model by Vincent Bach. While the Stradivarius is well-known for its iconic one-piece hand-hammered trumpet bell, Bach's original Apollo design featured a two-piece bell. Our new 170 line of professional-level instruments feature the same valve block and chassis as the world-famous 180 line of trumpets. Paired with our first ever two-piece, two-material bell that has been treated with the same top-secret annealing processes as our Stradivarius trumpets, the result is an instrument fit for a modern trumpet player of any style.

Features

The 17043GYR features a two-piece 43 bell with a gold brass stem made from sheet brass and yellow brass flare. The unique combination of materials results in a sound that offers the depth and richness associated with gold brass with the brilliance and shine of yellow brass. It is built on an ML .459" one-piece brass valve chassis, the same as our 180 line, and has a lightweight body with brass inner and outer slides, and brass Z braces. The model has been modernized with a new 6-style reversed leadpipe that offers exceptionally quick response and ease of play.

Specifications

- One-piece brass valve block with brass inner and outer slides
