

C.G. Conn®

88HNV Professional Trombone

The story of the C.G. Conn 88H trombone ultimately begins in 1874 with the vision and determination of one man: Colonel C.G. Conn. Founding a band instrument manufacturing company in the small town of Elkhart, Indiana, C.G. Conn quickly became known for his innovative brass designs and became the largest producer of trombones in the United States and earned the lasting reputation as “America’s trombone house.” Carrying on this tradition, the 88H is recognised for its unique tone colour and refusal to “break up” even at the most extreme dynamics making it one of the most widely used professional symphonic trombones in the world. The C.G. Conn 88H series. Trombones with a future as bright as their past.

Features

As a homage to the vintage Conn 88H, the classic sound and feel of early Elkhart models were combined with modern-day features to create a stunning example of balance and beauty. The 88HNV rejuvenates the iconic vintage-era trombone starting with the traditional rose brass bell, which is modeled after the bell weight from Emory Remington’s original 88H. The unique valve wrap provides the balance and feel of traditional vintage models but utilises a modern approach to the open wrap design. This helps to create an evenness throughout the entire range. Other features include an updated valve lever and rosewood thumb paddle, creating a more ergonomic feel. The stunning new engraving weaves through four eras of Conn history. The chrome-plated nickel-silver handslide tubes in combination with the standard rose brass outer material provides a warm resonant sound and smooth action. The 88HNV is coupled with a modern style lightweight case featuring a slim profile, elegant design, and stowaway backpack straps.

- New Vintage Conn bell
- Newly designed valve wrap
- Updated lever and ergonomic wooden thumb paddle
- Beautiful engraving highlights 4 eras of Conn history
- Lightweight slim style case
