

Bach®

A47XPS Professional Trombone

The Bach Artisan line brings together classic design elements from Bach Stradivarius trombones coupled with an expansive option of modular components, allowing players a more customized approach to find their voice. Every player has different needs and physique, which play an important role in finding an instrument that can help them create the concept of sound and individuality desired. The Bach sound has defined orchestral playing for generations, and now that sound can be taken to the furthest stretches of your imagination. Our most popular options are brought together in a collection of standard models, or you can customize your setup with a wide variety of components to fit your playing needs.

Features

The Peter Steiner signature model, A47XPS features a detachable flare screw bell option with lightweight gold brass bell. Alongside the standard A47X, this developed through extensive research to achieve more balanced resistance and improved air flow throughout the valve section. The result led to the X wrap design, creating a truly even feel in and out of the valve range that extends throughout the most expansive registers. Performers demand an instrument that can be pushed to the limits, the A47XPS delivers that and so much more. New features also include the standard Artisan rotor with a shorter throw and improved transition between notes. Comfort is greatly improved with the elegant and ergonomic design of a contoured rosewood thumb rest. The .547" bore Artisan handslide features a brass cross brace on the inner slide and contoured waterkey, with newly designed threaded leadpipe receiver. This model includes three interchangeable brass leadpipes to allow players more options to fit their individual needs.
