

Bach®

A42XN Professional Trombone

The Bach Artisan line brings together classic design elements from Bach Stradivarius trombones coupled with an expansive option of modular components, allowing players a more customized approach to find their voice. Every player has different needs and physique, which play an important role in finding an instrument that can help them create the concept of sound and individuality desired. The Bach sound has defined orchestral playing for generations, and now that sound can be taken to the furthest stretches of your imagination. Our most popular options are brought together in a collection of standard models, or you can customize your setup with a wide variety of components to fit your playing needs.

Features

The A42XN combines the great features from the A47X with the option of a 42 bell flare and nickel handslide crook, which provides a quicker response to articulations and touch of brilliance to the sound. The 42 bell stands out differently in the rate of taper compared to the 47 bell. The 42 taper is more gradual, offering a little more breadth or width of sound. The valve section features a design that was developed through extensive research to achieve a balanced resistance and improved air flow throughout the valve section. This result led to the X wrap design, creating a truly even feel in and out of the valve range that extends throughout the most expansive registers. Performers demand an instrument that can be pushed to the limits, the A42XN delivers that and so much more. New features also include the standard Artisan rotor with a shorter throw and improved transition between notes. Comfort is greatly improved with the elegant and ergonomic design of a contoured rosewood thumb rest. The .547" bore Artisan handslide features a brass cross brace on the inner slide and contoured waterkey, with newly designed threaded leadpipe receiver. This model includes three interchangeable brass leadpipes to allow players more options to fit their individual needs.

Specifications

- Modular design
- .547" large bore handslide with nickel crook
