BTB411 Intermediate Trombone

The Bach BTB411 trombone is an intermediate level instrument combining unique specifications and acoustic guidelines designed to develop and enhance the demanding skill sets required of today's young players. Vincent Bach fused his dual talent as an accomplished musician and meticulous engineer to create brass instruments of unparalleled tonal quality. Often copied but never duplicated, Bach instruments remain the sound choice of students and artists worldwide.

Features

The BTB411 is a well-designed, durable instrument perfect for students and amateur musicians in a variety of musical styles. This intermediate instrument is an ideal choice for players seeking the characteristics of a professional large bore F attachment trombone. Starting with the Bach Stradivarius threaded (removable) leadpipe, fit for a large shank mouthpiece, the model utilizes professional features at a more affordable price point. Made with an 8-1/2" two-piece yellow brass bell that delivers extremely responsive projection with a colorful and broad sound. The open wrap F section promotes stability in the high range and supplies easy response in the valve register. The yellow brass .547" bore handslide is paired with a rounded nickel crook which creates brilliant articulation with a full-centered sound. Chrome plated nickel silver inner handslide tubes provide the ideal surface for smooth and quick handslide action and the clear lacquer finish provides a subtle warmth to the overall sound.
